Student Name: M.VINAY **Reg.No.:192311146**

Course Code: CSA1304

Slot: B

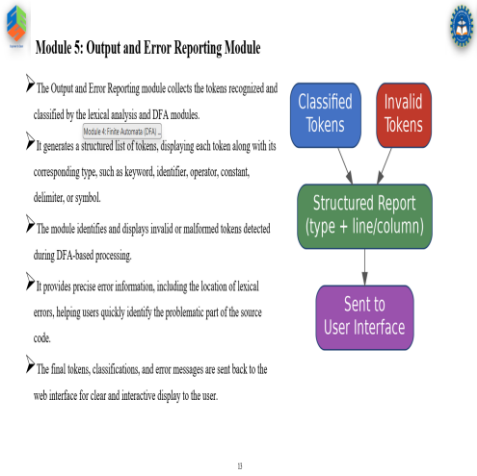
Course Name: Theory of Computation

Course Faculty:DR.Baskar kasi

Project Title:

Design and Implementation of a Web-Based Lexical Analyzer Using Finite Automata

Module Photographs:



Project Description:

- **Module 5: Output and Error Reporting Module**
- The Output and Error Reporting Module is responsible for collecting the tokens classified by the lexical analyzer and identifying any invalid tokens detected during DFA processing. It generates a structured output containing each token along with its corresponding type, such as keyword, identifier, operator, constant, delimiter, or symbol. The module also detects lexical errors and provides the exact line and column location of invalid tokens. Finally, the processed results are sent back to the web-based User Interface, where they are displayed interactively to help users understand and correct errors in their source code.
